

Assignment 1

Due Jan 31 by 11:59pm **Points** 10 **Submitting** a file upload **File Types** zip
Available until Feb 5 at 11:59pm

This assignment was locked Feb 5 at 11:59pm.

Hamilton Adult Soccer Club Site

Statement of Authorship

- Lab to be done individually
- In order to be graded, the following Statement of Authorship must be on the About page
- I, Firstname Lastname, student number 123456789, certify that this material is my original work. No other person's work has been used without due acknowledgment and I have not made my work available to anyone else.
- Replace Firstname Lastname with your name and 123456789 with your student number

Requirements

- Create a C# ASP.NET Web Application (.NET Framework) named **assignment1**, ensure solution and project are not in same directory
- Use version **.NET Framework 4.7.2** with the Web Forms template, do not configure HTTPS
- Any method you implement must have XML comments
- The site allows the user to observe and maintain various tables of the HASC database
- Use this script to create the database **HASC.sql**
- Your final submitted work must use localhost\sqlexpress in the connection string

 You will need to modify some of the pages supplied by the template and you will need to create additional pages

- Apply an auto format to all grid views, you may choose a different auto format than displayed however, ensure you use the same auto format throughout your site
- Ensure to apply a Bootstrap CSS class to ensure all grid views to ensure they have adequate spacing
- Each of the existing pages and new pages will need to have their Page Title property modified
- Most grid view columns do not have default names

Site.Master and Default.aspx

- Site.Master changes
 - Application name
 - Menu links to Divisions, Recent, NewScore and Register pages

- Footer: change 20XX to current year and Firstname Lastname to your name
- Default.aspx changes
 - Jumbotron element: text, button links to the Divisions page
 - First row element: text, button links to the Recent page
 - Second row element: text, button links to the NewScore page
 - Third row element: text, button links to the Register page

Divisions.aspx

- h3 sub heading below the Divisions heading.
- Grid showing divisions table, note it is not in default sort sequence
- The "Age is determined..." is just flavour text and does not have to be used in any calculations

Divisions

HASC features the following divisions.

Division
Female - 35 & Over
Female - Under 35
Male - 35 & Over
Male - Under 35
Mixed

Age is determined as of March 1 of each year.

© 20XX - Firstname Lastname

Recent.aspx

- Grid showing 10 most recent scores
 - SELECT statement will need to join the teams table twice, once for home team and once for away
 - WHERE criteria will need to ensure that only games with a score (home or away) are selected
 - ORDER BY clause will need to ensure that games are sorted most recent first

Recent Scores

Date	Home	Score	Away	Score
2019-06-19	Cardinals	4	Hornets	4
2019-06-19	Saints	0	Spurs	2
2019-06-18	Eagles	4	Red Devils	3
2019-06-18	Tigers	1	Wolves	0
2019-06-17	Bulls	0	Gunners	2
2019-06-17	Harriers	0	Vikings	1
2019-06-16	Foxes	4	Pirates	3
2019-06-16	Rebels	3	Terriers	0
2019-06-15	Black Cats	3	Blues	4
2019-06-15	Lions	4	Red Dragons	0

NewScore.aspx

- Drop-down list shows concatenation of referee's first name and last name, sorted by this
- When a new referee is selected, their assigned games that don't have a score are displayed in the grid
- When the Edit link is clicked on a row in the grid, only the home team score, away team score and game notes are available; other columns are read only
- Extra attention will need to be paid to the UPDATE command of the data source; by default it will set a number of columns to NULL; it should be edited to only update the desired columns, instead of all columns; the INSERT and DELETE commands aren't needed in the data source and may be deleted
- If everything is working correctly, once a game is given a score, it should disappear from the grid and it should now appear on the New Scores grid

Register.aspx

- Use the **Bootstrap grid system** (<https://getbootstrap.com/docs/3.4/css/#grid>) to layout the form rows

```
<div class="table row">
  <div class="col-md-2">Prompt</div>
  <div class="col-md-2">Text box or other control</div>
  <div class="col-md-2">Validator(s)</div>
</div>
```

- First name text box gets focus
- Birth date text box is in date text mode
- Drop-down list uses a SQL data source connected to the divisions table

- Use required field validators to ensure the 4 text boxes have values
- Use a regular expression validator to ensure email is formatted correctly, keep focus in text box if error
- Display a validation summary
- Cancel button resets the validators
- Use a literal to display feedback from the server-side code
- When Submit button is clicked, perform the following server-side
 - Check that page is valid and only proceed if it is
 - Verify that the age of applicant is 18 years or older, if it isn't provide feedback via the literal with a red error message and give focus to the date text box
 - Place database code inside try/catch block, if an exception occurs, provide feedback via the literal with a red error message
 - Retrieve connection string
 - Build a SQL command that will retrieve the current highest person_id from the persons table; you may use a SqlDataReader or you may use the ExecuteScalar method of the command object
 - Reuse the SQL command and set its CommandText property to an INSERT statement that will add the new applicant to the persons table as a player (don't forget to add 1 to the retrieved person_id)
 - Use command parameters to guard against SQL injection
 - Execute the SQL command, if successful, provide feedback via the literal and reset the inputs
 - Error and success messages don't have to look exactly as screenshots, these messages were achieved using classes from Bootstrap

Submission Instructions

- Once you have completed the assignment
- Exit all instances of Visual Studio
- Open File Explorer
- Find the folder where your assignment is
- These instructions will use C:\code\co884\assignment1 as an example
- Verify that the expected files are present
- Double-click the assignment1 folder
- Click the View menu and select Hidden Items if necessary
- Delete the **.vs** folder, it stores temporary data and can get quite large
- Return to the C:\code\co884 folder
- Right-click the assignment1 folder and select Send To / Compressed (zipped) folder
- Submit this file (assignment1.zip) by clicking the Submit Assignment button in the upper-right of this page and completing the submission
